

Independence Day Special

*Independence from
Control Points, That Is!*

Take advantage of our limited time sale on the world's most effective high accuracy drone mapping system.

AirGon's Loki direct geopositioning system is a high accuracy positioning solution which mounts on a drone to determine camera position estimates for the downstream processing software. Direct geopositioning dramatically improves the horizontal and vertical accuracy of drone mapping projects, reducing and sometimes even eliminating the need for project control.

We're offering 3 bundled options that each include all the necessary hardware and software components to perform high-accuracy metric mapping, including **Loki**, our direct geopositioning system.

Drone Bootstrap Kit Only

I have a base station, and I know what I'm doing. = **\$15,500** (You Save \$2,709)

Drone Bootstrap Kit + Training 1

I need a base station and I'll come to Huntsville, AL for training. = **\$20,500** (You Save \$3,984)

Drone Bootstrap Kit + Training 2

I need a base station but I think it is more effective to train at my site*. = **\$22,500** (You Save \$3,784)

"The AirGon Mapping Kit has saved us lots of time and lots of money!"

- Brian Forkner, Phillips' Soil
